

Robert F. Faulkner, D.D.S., Inc.

Maxillofacial Prosthodontist

## Dental Hygiene Appointments

Regular dental prophylaxis (dental cleaning) is essential to the health and well-being of the oral cavity. Evaluation of the hard and soft tissues, as well as, cancer screenings are performed at each visit. It is of the utmost importance to diagnose and arrest disease in the early stages to ensure successful maintenance of the natural dentition and any dental prosthesis that has been fabricated for you.
